FNSA-I

Suspect and nontarget screening methods have recently detected perfluoro-1-nonanesulfonamide (FNSA) in marine animals, including bivalves and dolphins. As part of our commitment to offer comprehensive product lines, **Wellington's** team of chemists has prepared a certified reference standard for this compound, **FNSA-I**. This new addition completes our range of native perfluoroalkanesulfonamide standards from C₄ to C₁₀.

Wellington also offers a selection of N-substituted perfluoroalkanesulfonamide reference standards, both native and mass-labelled, as well as linear/branched isomeric mixtures.
